PROFILE

Software engineer and AI researcher with an MSc in Software Engineering (Distinction) and about three years of engineering experience, including regulated financial-services systems at Equifax. Research interests: accountable and responsible AI, explainable and reproducible ML evaluation, and compliance of AI systems, including generative AI under the EU AI Act. Experienced in statistical evaluation of ML models and in building and deploying production services.

EDUCATION

University of West London, UK Sep 2023 - Sep 2024

MSc Software Engineering, Distinction (awarded 18 October 2024)

- Dissertation (85/100): digital twin and IoT pipeline for building energy monitoring; Random Forest model achieving R^2 of 0.999 on held-out data.

Crimson College of Technology, Pokhara University, Nepal Sep 2016 - Jul 2021

Bachelor of Computer Information Systems (BCIS), CGPA 3.31/4.0

- Modules include Major Project (A), Data Structures and Algorithms (A), Legal Aspects of Business and Technology (A-) and Information System Security (B).

RESEARCH

- Manuscript in preparation for submission to MDPI Sensors (first author, with Dr F. Dinmohammadi, University of West London): "No Single Model Dominates: A Regime-Aware, Cross-Dataset Benchmark of Degradation Models for Lithium-Ion Battery Remaining Useful Life". Seven models, including CNN-LSTM, Gaussian process regression and XGBoost, benchmarked on NASA PCoE and Oxford data under a chronological protocol, with bootstrap confidence intervals, Wilcoxon tests with Holm correction and rolling-origin validation.
- Interactive dashboard (React, Recharts) presenting every figure and metric of the benchmark: battery-rul-dashboard.vercel.app
- CNN-LSTM remaining-useful-life prediction on NASA C-MAPSS turbofan data, RMSE 14.84, with SHAP interpretability analysis.

EXPERIENCE

Independent research and upskilling Oct 2024 - Present

Self-directed research and study

- Battery degradation benchmark manuscript and dashboard (see Research); coursework in deep learning and full-stack development.

Oncore Corporation (client: Equifax), Kathmandu, Nepal Sep 2021 - Jun 2023

Java Developer

- Built and maintained Java / Spring Boot microservices on Google Cloud for Equifax credit-risk and identity-verification systems.
- Designed asynchronous data pipelines (Cloud Pub/Sub, Firestore) deployed through Jenkins CI/CD, with 95%+ test coverage on owned services.
- Built services for a regulated financial-services client; presented technical work to client stakeholders in 50+ review meetings.

InfoxIT Pvt. Ltd, Nepal Jan 2020 - May 2021

Java Intern

- Developed backend ERP modules in Java, Spring and Hibernate for banking clients.
- Designed MySQL schemas and optimised queries based on user feedback.

SKILLS

Machine learning: Python, PyTorch, TensorFlow, scikit-learn, pandas, NumPy, SHAP; CNN, LSTM, Gaussian process regression, XGBoost, Random Forest.

Engineering: Java, Spring Boot, REST APIs, Google Cloud Platform, Docker, Jenkins CI/CD, Git, SQL (MySQL, PostgreSQL), JavaScript / React.

TRAINING

Neural Networks and Deep Learning, DeepLearning.AI (2026) | Full Stack Developer Traineeship, IT Career Switch (2025 - 2026) | Full-Stack Engineer Career Path, Codecademy (2025)

REFEREES

Dr Fateme Dinmohammadi, Associate Professor in Artificial Intelligence, Course Leader MSc Software Engineering, School of Computing and Engineering, University of West London | fateme.dinmohammadi@uwl.ac.uk (dissertation supervisor and co-author)

Dr Thomas Madsen, Lead for Teaching and Quality, School of Computing and Engineering, University of West London | thomas.madsen@uwl.ac.uk
