PROFILE

Machine learning researcher and software engineer. First-author paper under revision at MDPI Sensors on cross-dataset benchmarking of ML degradation models, with emphasis on statistical robustness and uncertainty quantification. MSc Software Engineering with Distinction and nearly three years of production engineering experience. Research interests: deep learning for temporal and multi-modal data, uncertainty quantification, and reproducible ML evaluation.

EDUCATION

University of West London, UK *2023 - 2024*

MSc Software Engineering, Distinction (awarded 18 October 2024)

- Dissertation (mark 85/100): digital twin and IoT pipeline for building energy monitoring; Random Forest predictive model achieving R^2 of 0.999 on held-out data.

Crimson College of Technology, Pokhara University, Nepal *2016 - 2021*

Bachelor of Computer Information Systems (BCIS), CGPA 3.31/4.0

- Final-year modules graded A, including Major Project, Data Structures and Algorithms, and Mobile Computing.

RESEARCH AND PUBLICATIONS

- **First-author paper under revision at MDPI Sensors** (with Dr F. Dinmohammadi, University of West London): "No Single Model Dominates: A Regime-Aware, Cross-Dataset Benchmark of Degradation Models for Lithium-Ion Battery Remaining Useful Life". Seven models including CNN-LSTM, Gaussian process regression and XGBoost benchmarked across the NASA PCoE and Oxford datasets under a chronological evaluation protocol; bootstrap confidence intervals, Wilcoxon tests with Holm correction, rolling-origin validation and leave-one-cell-out jackknife.
- **Interactive research dashboard** (React / Recharts) reproducing every figure and metric in the manuscript: battery-rul-dashboard.vercel.app
- **CNN-LSTM remaining-useful-life prediction** on NASA C-MAPSS turbofan degradation data, RMSE 14.84, with SHAP interpretability analysis.

TECHNICAL SKILLS

Machine learning: Python, PyTorch, TensorFlow, scikit-learn, pandas, NumPy; CNN, LSTM and hybrid architectures; Gaussian process regression, XGBoost, Random Forest

Statistical methods: bootstrap confidence intervals, non-parametric hypothesis testing, cross-validation design, sensitivity analysis, uncertainty quantification

Software engineering: Java, Spring Boot, REST APIs, Google Cloud Platform, Docker, Jenkins CI/CD, Git, SQL (MySQL, PostgreSQL), JavaScript / React

PROFESSIONAL EXPERIENCE

Oncore Corporation (client: Equifax) *Sep 2021 - Jun 2023*

Software Engineer, Kathmandu, Nepal

- Built and maintained Java / Spring Boot microservices on Google Cloud for Equifax credit-risk and identity-verification systems.
- Designed asynchronous data pipelines (Cloud Pub/Sub, Firestore) deployed via automated Jenkins CI/CD, with 95%+ test coverage on owned services.
- Worked with large-scale sensitive data under strict financial-services compliance; presented technical work to client stakeholders in 50+ review meetings.

InfoxIT Pvt. Ltd *Jan 2020 - Jun 2021*

Software Engineering Intern, Nepal

- Developed backend ERP modules in Java, Spring and Hibernate for banking clients.
- Designed MySQL schemas and optimised queries based on user feedback.

FURTHER TRAINING

Neural Networks and Deep Learning, DeepLearning.AI (2026) • Full Stack Developer Traineeship, IT Career Switch (2025-2026) • Full-Stack Engineer Career Path, Codecademy (2025)

REFEREES

Dr Fateme Dinmohammadi, Senior Lecturer, School of Computing and Engineering, University of West London | fateme.dinmohammadi@uwl.ac.uk (dissertation supervisor and co-author)

Dr Thomas Madsen, Lead for Teaching and Quality, School of Computing and Engineering, University of West London | thomas.madsen@uwl.ac.uk

Yogya Sharma, Founder, Oncore Corporation | yogya.sharma@omglobaltech.com
